Character design

Dungeon Crawler

Player character concept art

1. Shape studies

2. Exploring character designs and different ideas

4. Refining the character design and details.

5. Finalising the design

3. Analysing color values and silhouettes

6. Ready for 3D-modeling

- A near complementary color combination for balanced contrast. Purple and blue being dominant colors complemented with beige and a bit of orange.

- Mainly near colors creating a more cohesive look. The only complementary color is the gun hose making the gun the focal point with its striking primary yellow.

- A tetrad color scheme balanced with grey tones to avoid making it too busy, but overall it's fairly dynamic and engaging.

(green & yellow → blue & red)

Character design

Altar of Madness

1. First designs and studies

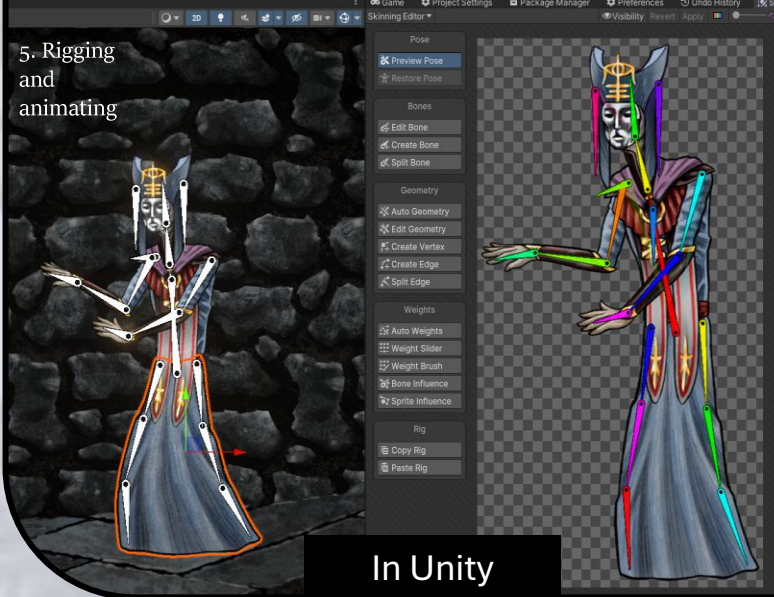

4. Finalising the design

3. Refining the character design and testing colors

5. Rigging and animating

In Unity

Testing different rigs

Enemy Priest

2. Further iterations

Level design

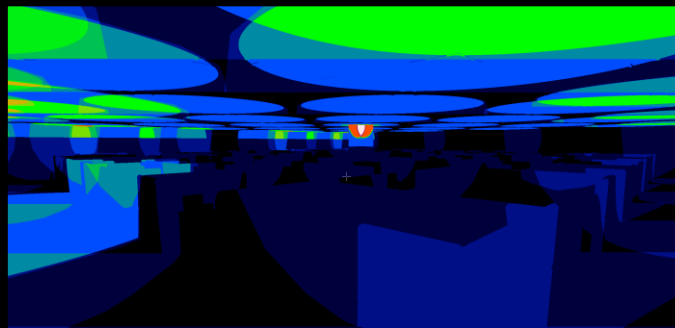

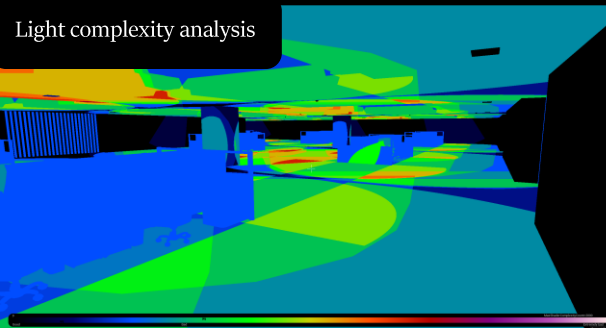

Sci-fi fight arena

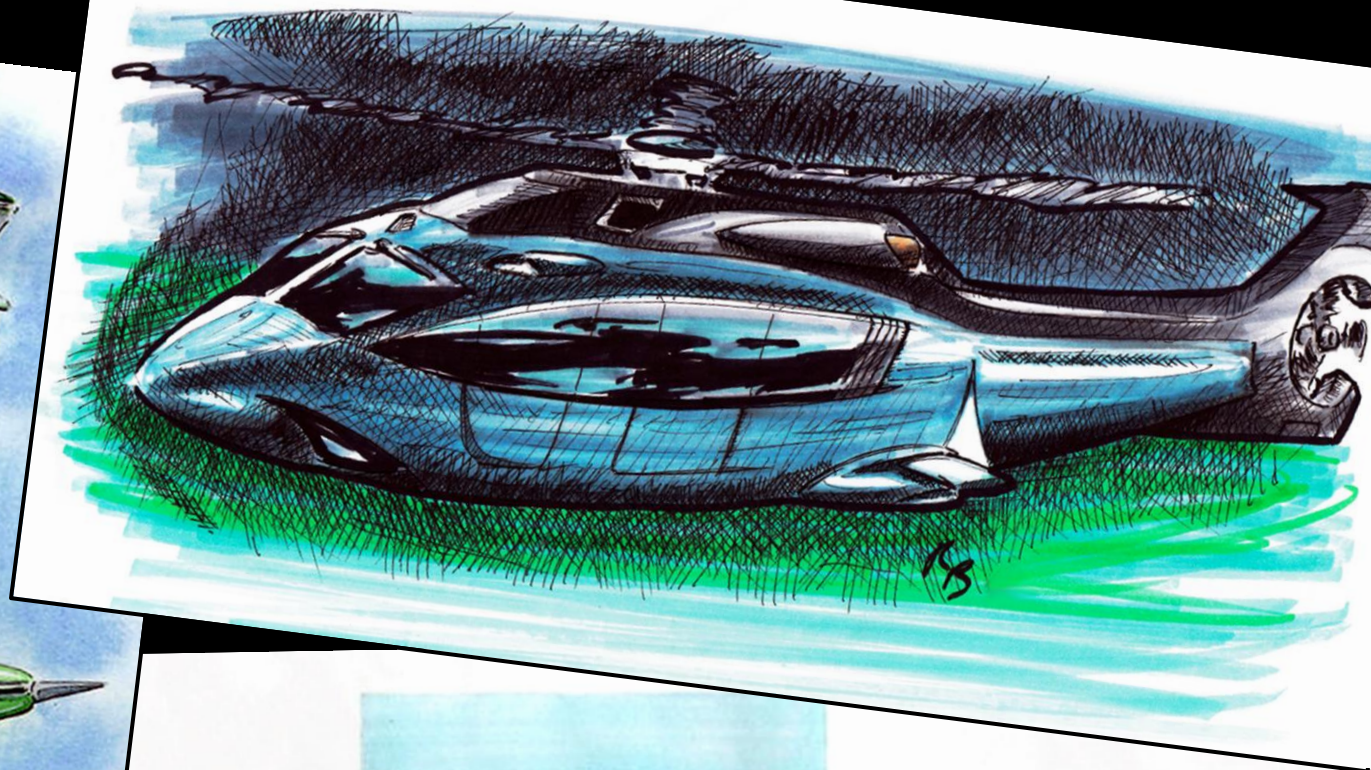

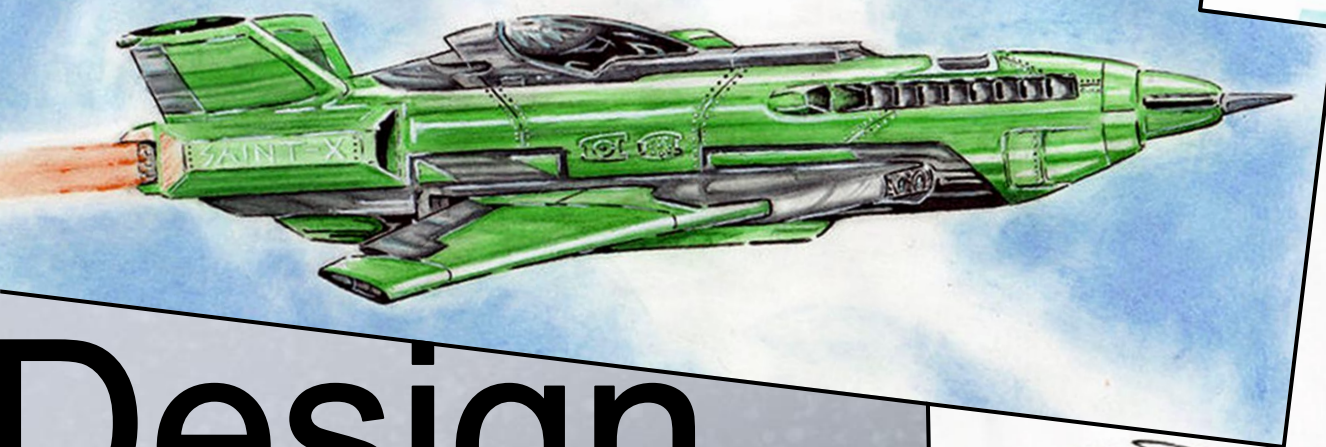

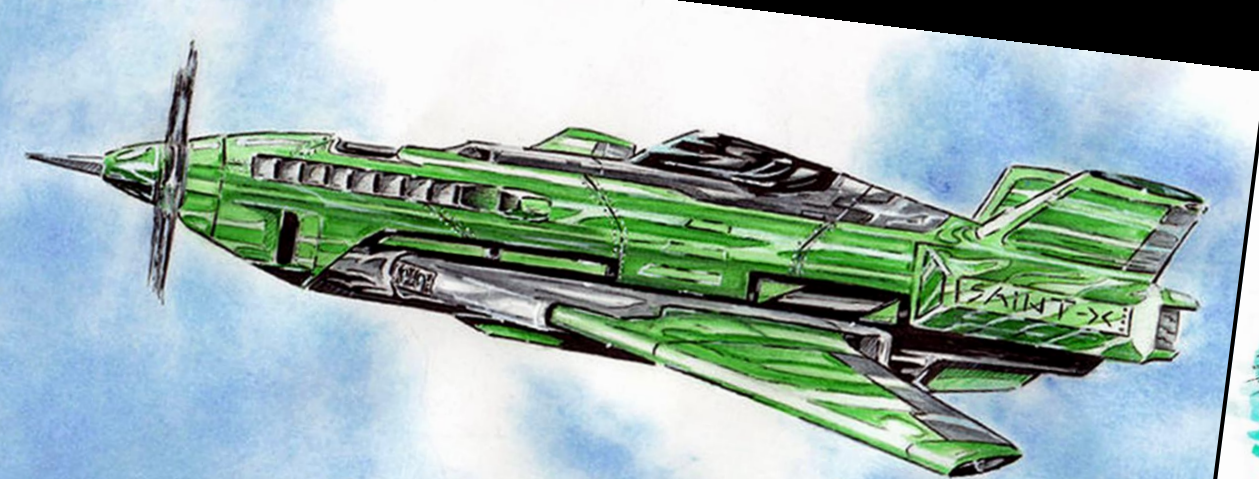

Level design and lighting for a demo of a horror office game

Unreal Engine 5.6

Levels were designed with Unreal free and bought assets. Lighting design included local lighting, global lighting settings, post-processing and optimisation work. No light baking, only dynamic lights.
